Drops Direction

1. Open bottle by pushing down on dropper/lid and rotating counter-clockwise.
 2. Press on dropper bulb and slowly release to aspirate medication into it.
 3. Slowly lift dropper and wait for solution from outer walls to drip back down into bottle.
 4. Dispense drops under the tongue by pressing on bulb.
 5. Leave it under your tongue as long as possible to increase absorption, then swallow remnants.
- Each drop provides approximately of 0.5mg of medication.
 - A full dropper provides approximately 40 drops (20mg) of medication.
 - Patients should feel the medication effects between 1-2 hours of ingestion and effects should last between 4-6 hours (depending on dosage).
